Open Source Integrators Gives Back to the Community to Help Grow Science, Technology, and Innovation

Open Source Integrators Gives Back to the Community to Help Grow Science, Technology, and Innovation

As a true thought leader and mentor in Open Source ERP, Open Source Integrators (OSI) is helping to make it real for small-to-medium-sized businesses dedicated to the creation of new science, technology, and innovation. OSI is giving back to the community by supporting an entrepreneurial company in the manufacturing realm to enhance the capacity of people, companies, and organizations to develop and apply science and technology and compete responsibly in the global marketplace. They believe so deeply in the benefits of helping these businesses grow, that they are donating their expertise to help.

"The most important benefit for me and companies I work with is the Open Source Integrator team, says the company's state director. OSI assembled a team of professionals with a unique blend of skills that fill almost every conceivable gap in client capabilities. However, OSI team members don't just jump in and take over for the client. The OSI Team's extraordinary people skills, combined with subject matter expertise, complement client skill sets and foster project buy-in from the beginning. This attitude sets conditions for a superior solution built around client needs vs. a cookie cutter approach provided by many similar firms.

Situation

Local hometown manufacturers in Kentucky partner with this company to enable growth of small businesses, and OSI is right there with them to help take them make the leap from concept to making it real. OSI is particularly focused on supporting veteran-owned businesses.

On a continual basis, OSI is offering consulting time to customers and clients of this entrepreneurial company.

Usually, rudimentary issues are addressed which can inhibit the business' growth moving forward:

+ Questions addressed include: "How do I start?" and "I have an idea, how do I make it real?"

+ It's one thing to build a prototype, another to say we are going to manufacture it. Open ERP processes can help companies take the leap.

+ "Working with a diverse group of people on an accelerated time line is always a challenge," the company's state director noted. "The Open Source Integrators Project Management Team works hard to educate clients through the entire process. They also listen to the client and make sure they address client concerns from cradle to grave for each project."

Examples

+ There is a critical spare part shortage in aviation, and a company is attempting to grow their make-to-order parts for old Army helicopters. Since the Army needs this gear and it's difficult to obtain it, this company can connect students at a university with the machine tools necessary so they can get these things done.

+ A woman-owned business enterprise in optimizing cost-effective solutions to the business infrastructure needs of their clients. The company is a quality leader in outsourced advanced optical network integration services for carriers, equipment manufacturers, enterprise clients, and other service providers.

Solutions

Depending on the nature of the company's needs, advisement in these best-of-class, integrated Open ERP areas may include:

+ **Accounting:**
  Accounting-centric Open ERP software integration.

+ **Business Process Management:**
